

Video Encoding in the cloud
Oliver.Gunasekara@NGCodec.com
 CEO & Co-founder
 @OlyG

NGCodec Mission

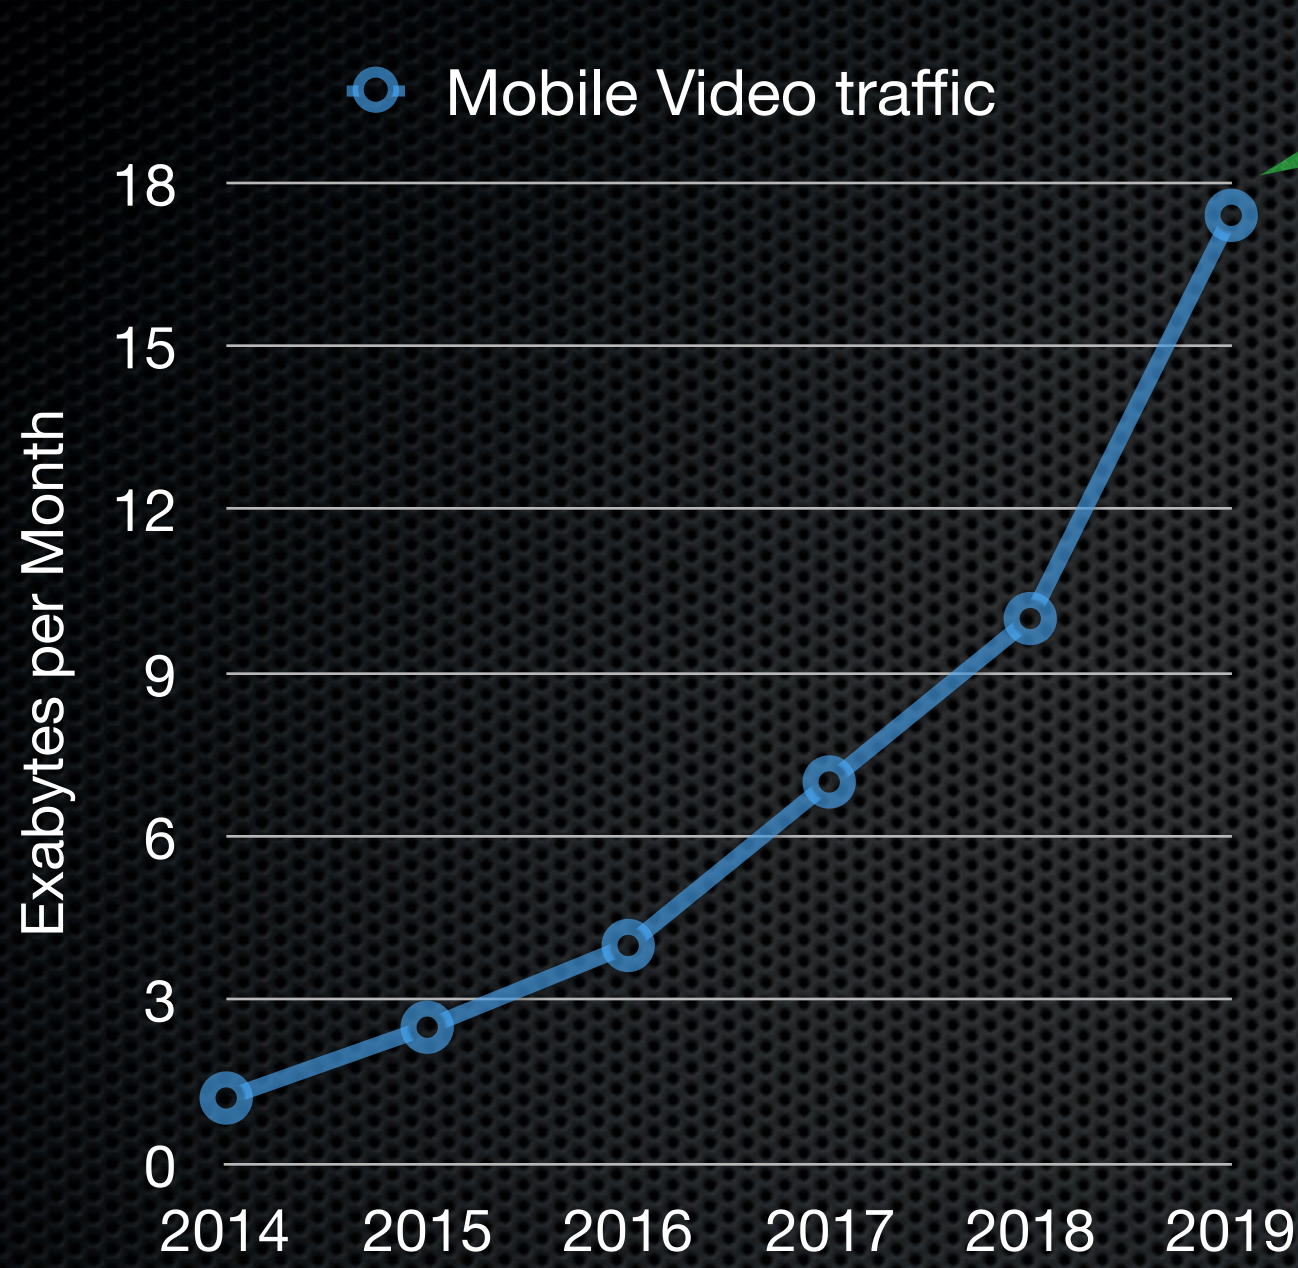

To be market leader in Cloud Video Encoding

- Leverage our own HW acceleration (FPGA/ASIC)
- Provide best VQ, latency, channel density, cost per RU
- Support all major video standards (AVC, HEVC, VP9, AV1)
- Make our solutions look like software encoders

Video is exploding

“Video will be 80% to 90% of total IP traffic by 2017”
Cisco VNI 2015

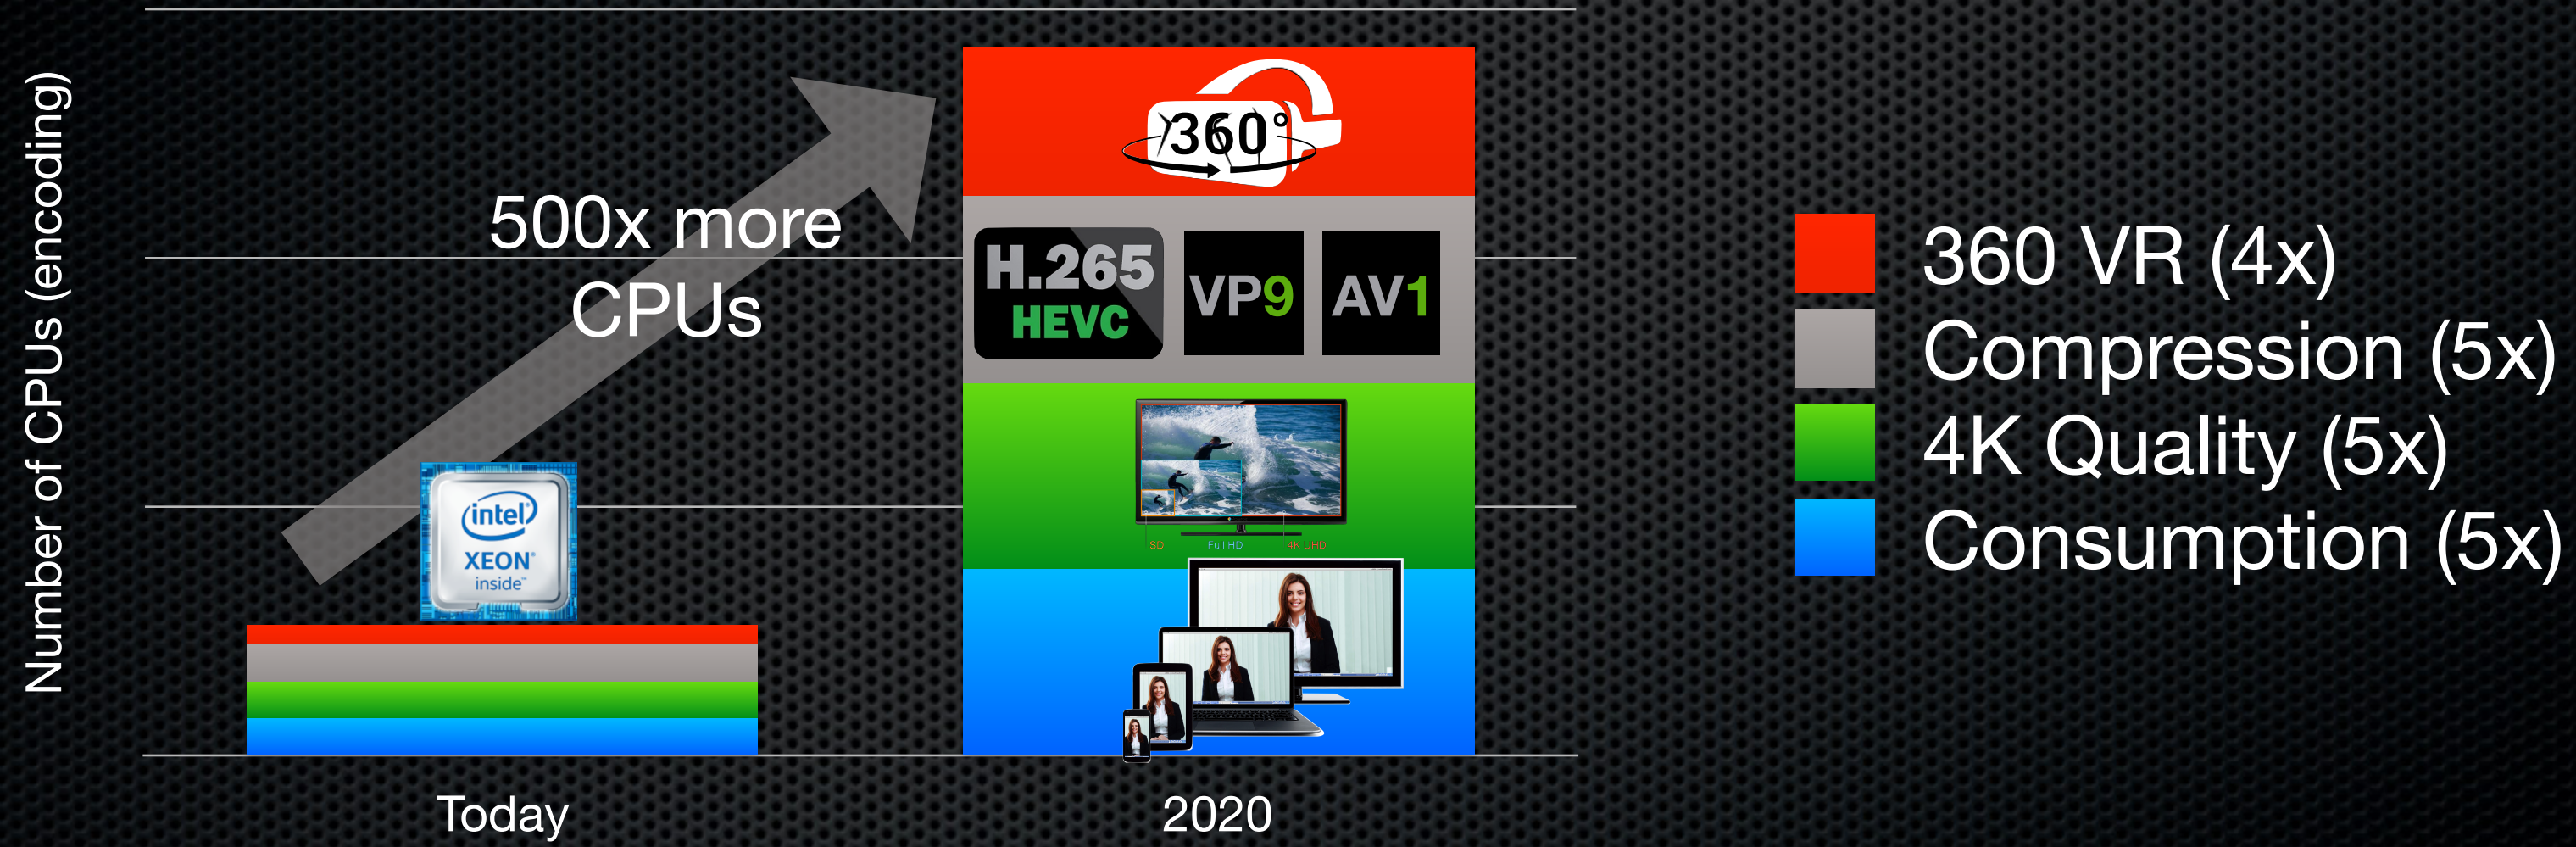

And each source video requires ~20 encodings

VR / AR need 20x video bandwidth

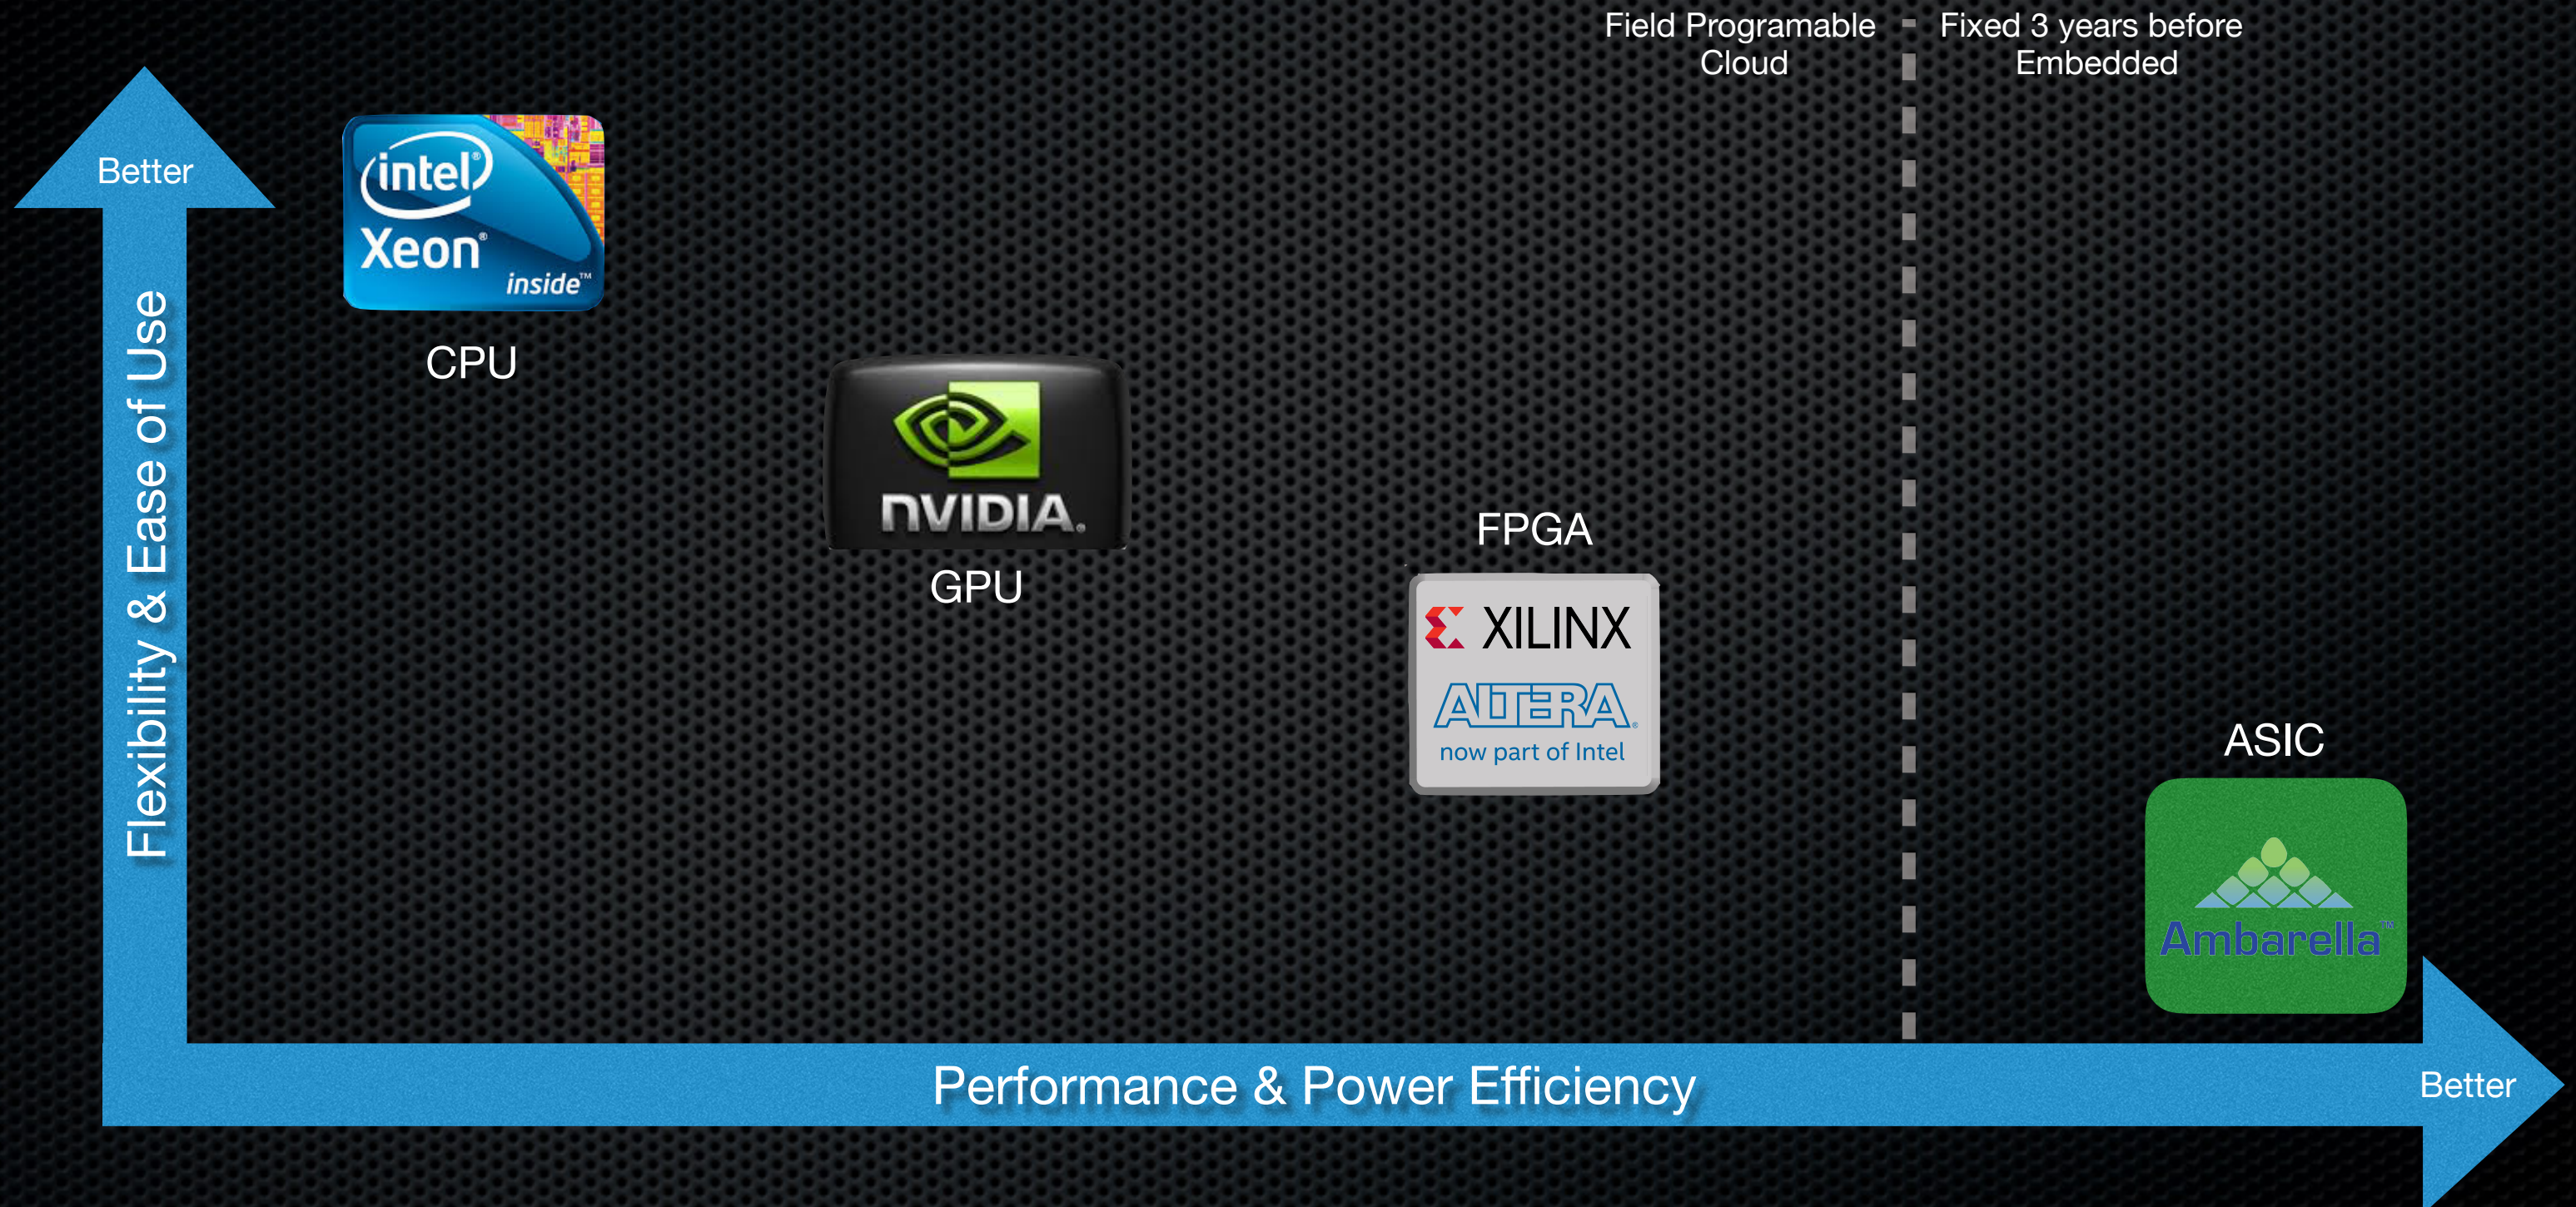

Source: Cisco VNI Mobile 2015

Video Encoding Cost Is Growing Rapidly (Capex & Opex)

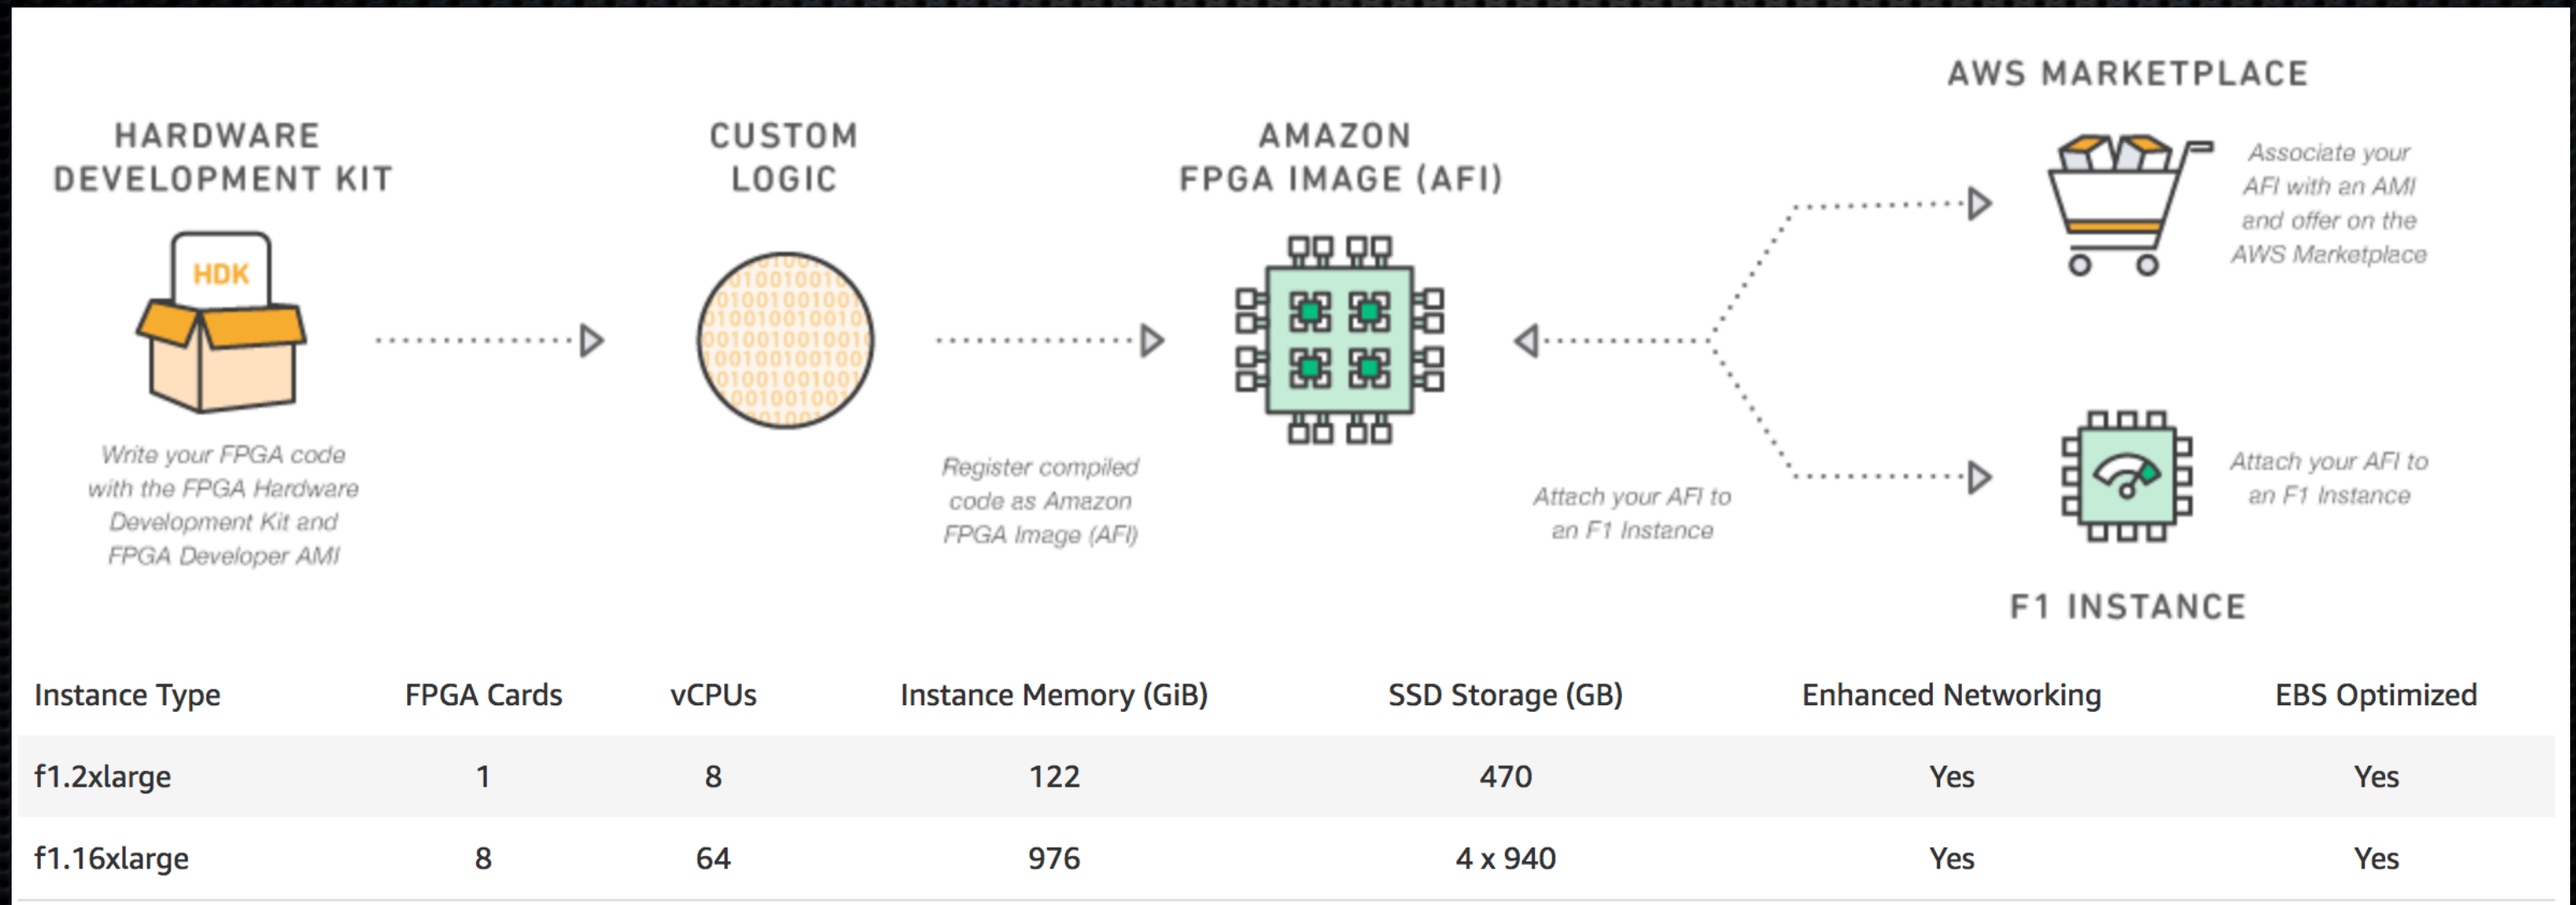

facebook YouTube twitch NETFLIX

Current Video Encoding Is 99% on CPUs

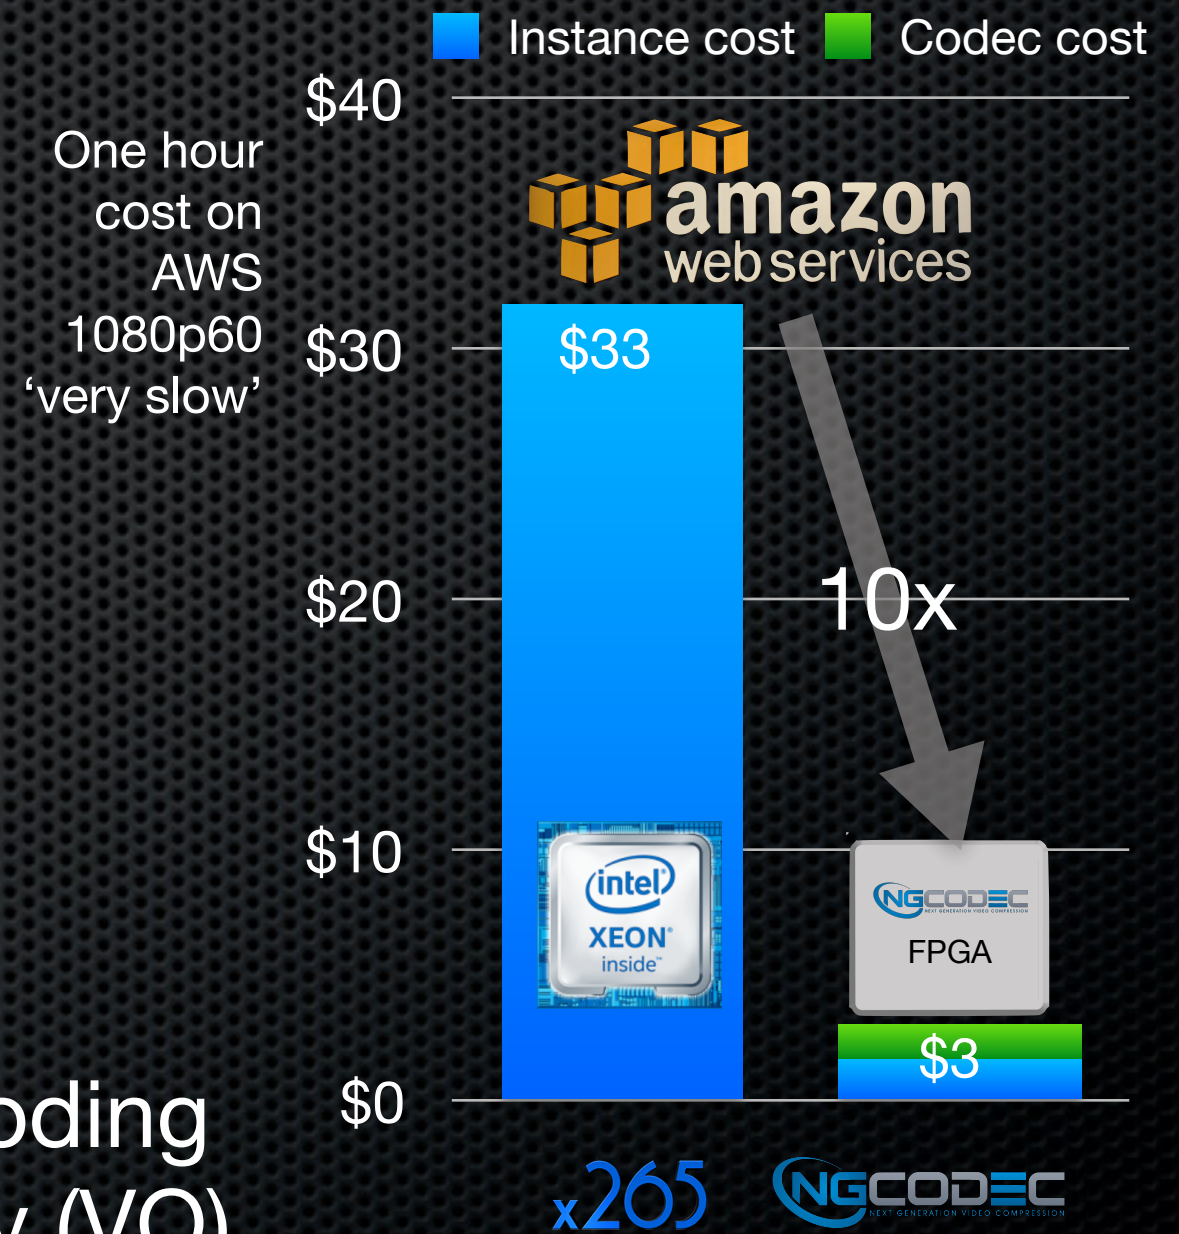

AWS EC2 F1 Instance

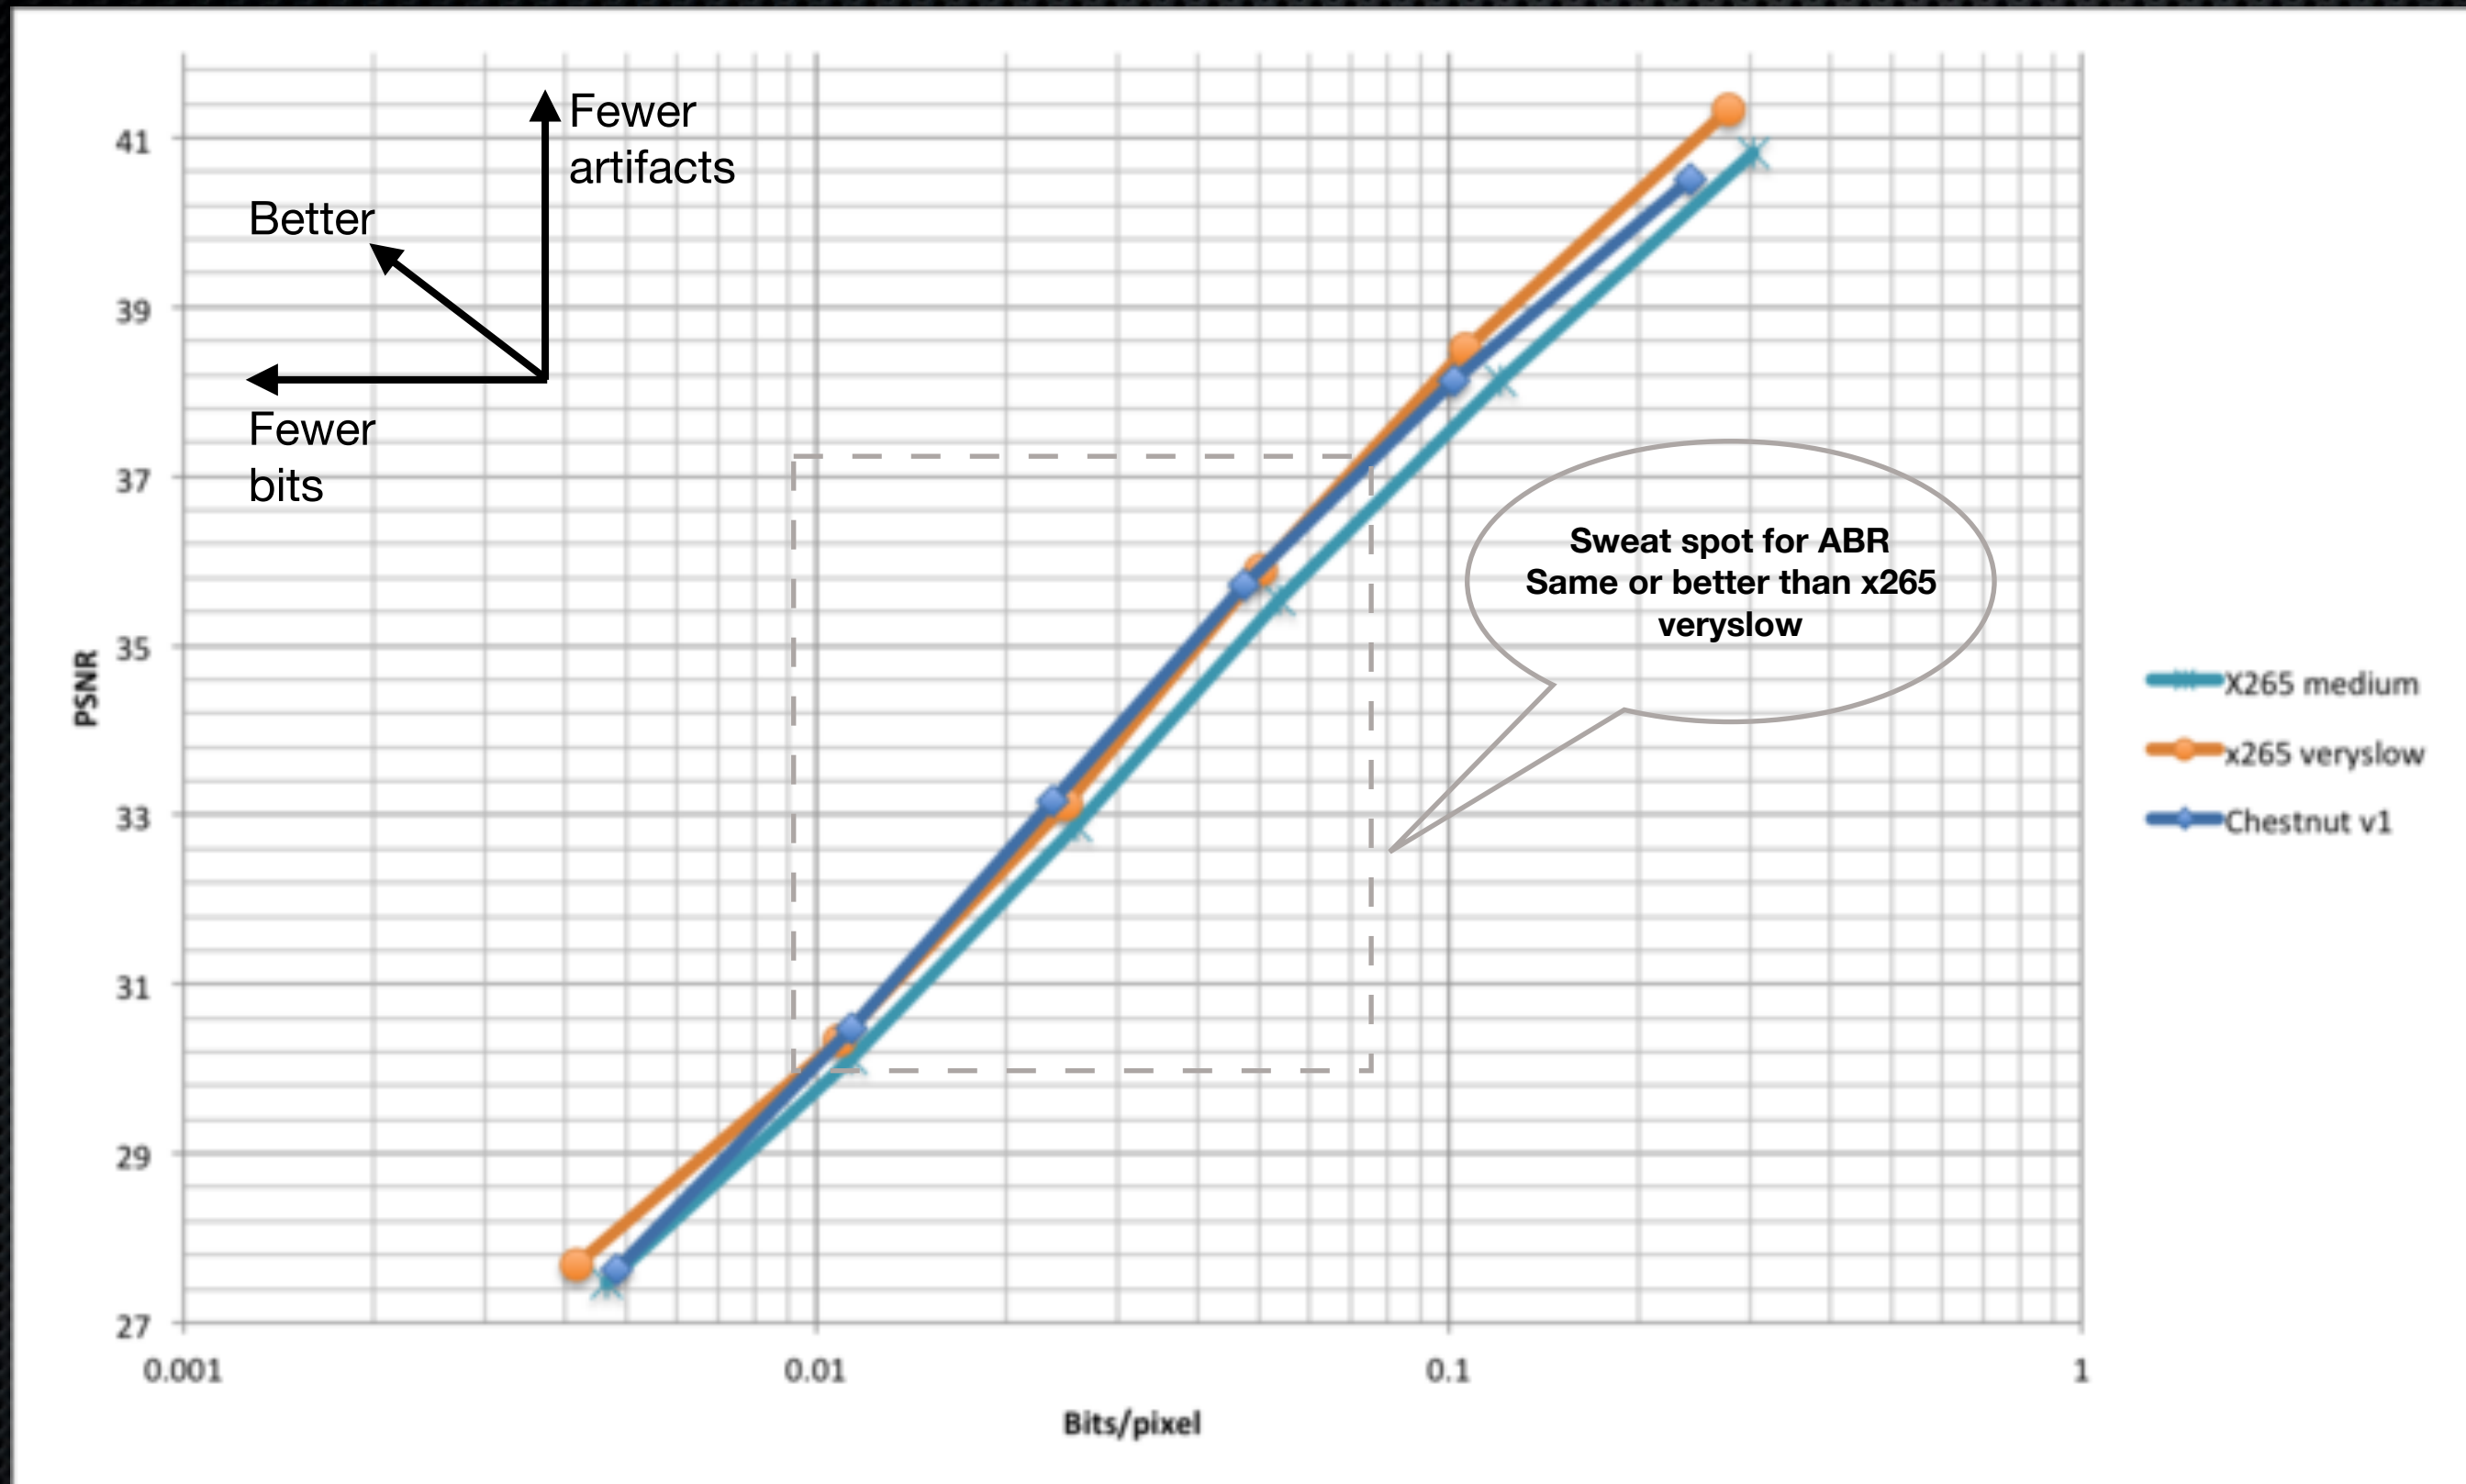

NGCodec FPGA Solutions Are Superior

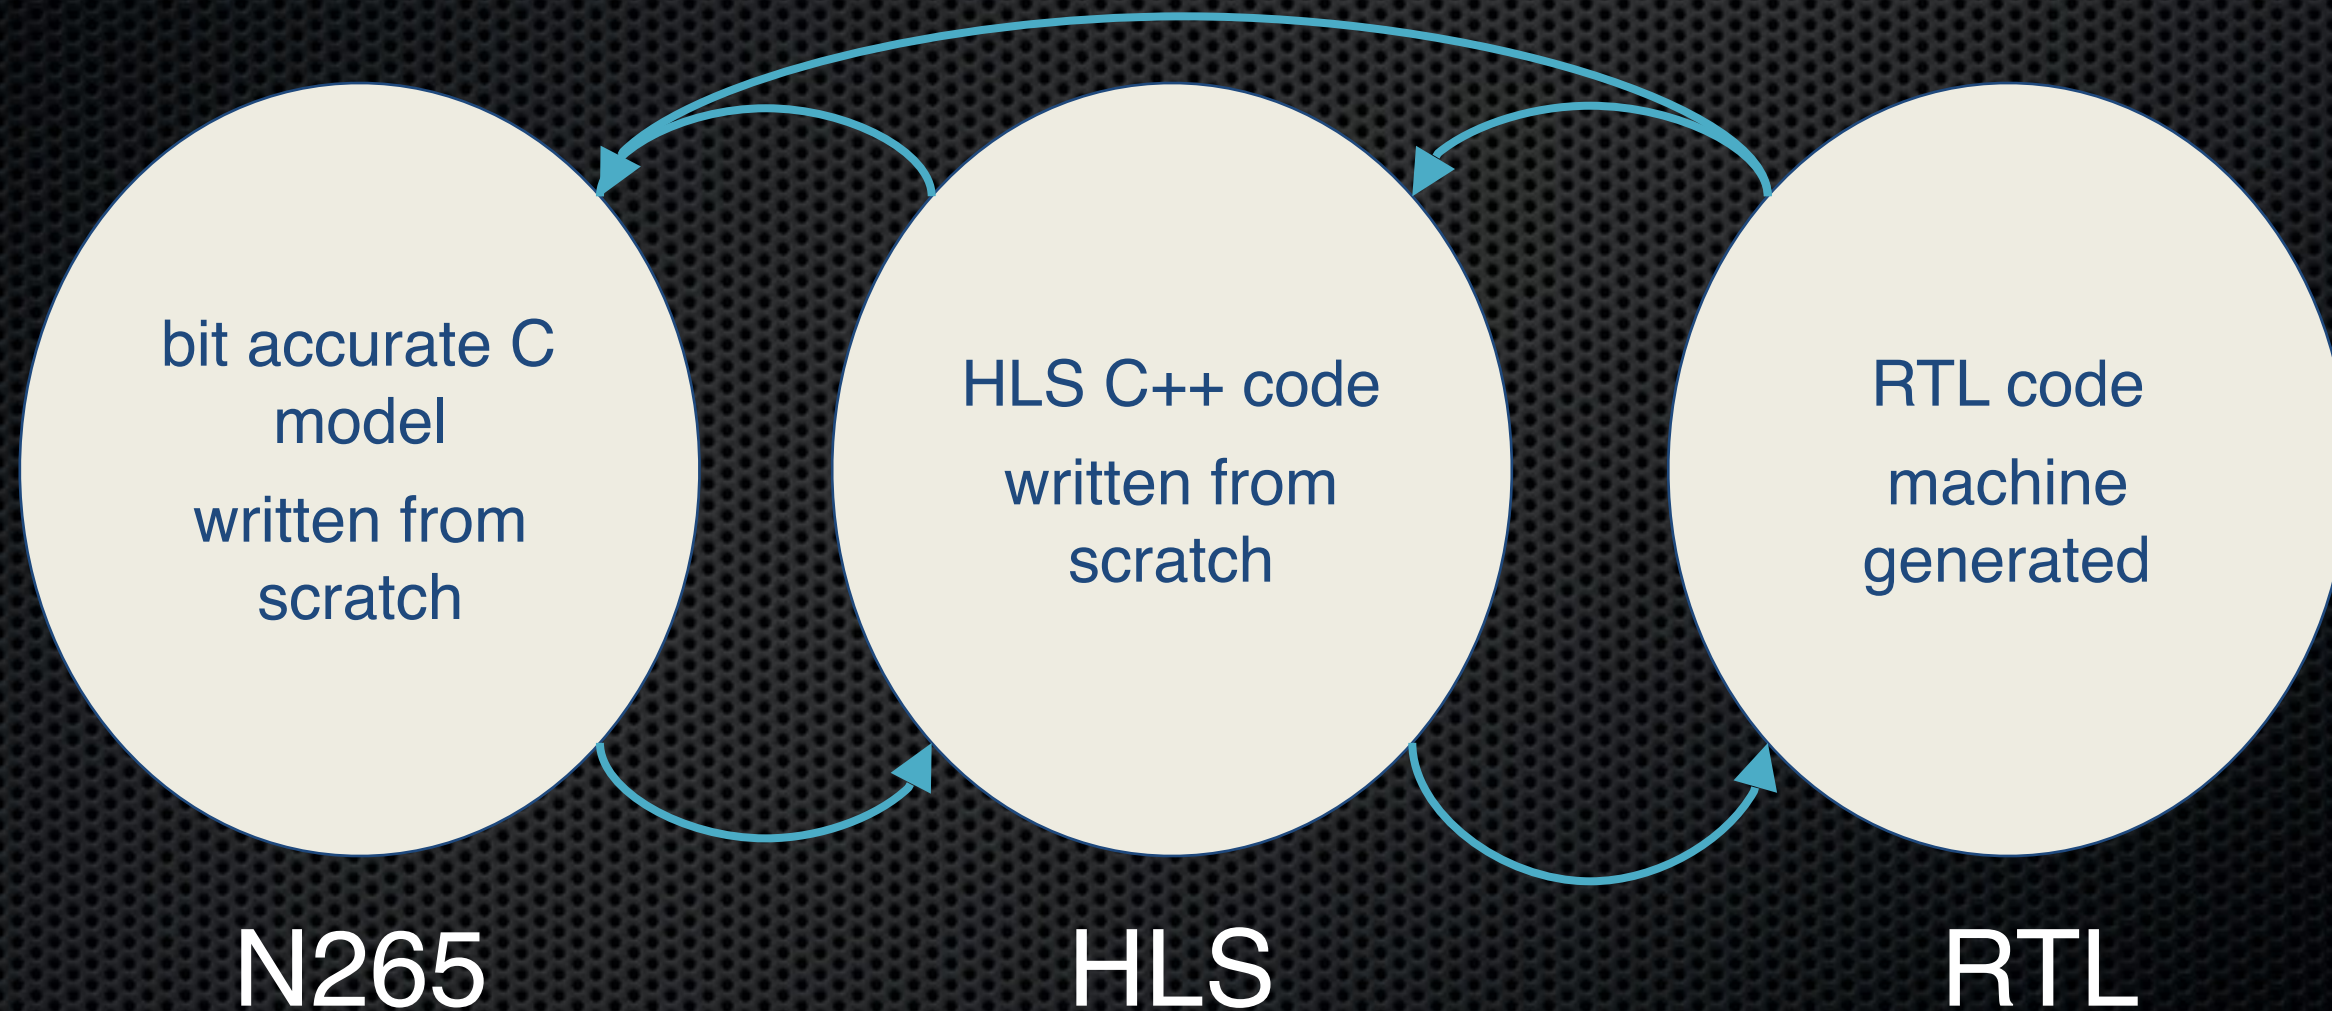

- ✦ 10x Lower Cost Encoding
- ✦ Highest Video Quality (VQ)

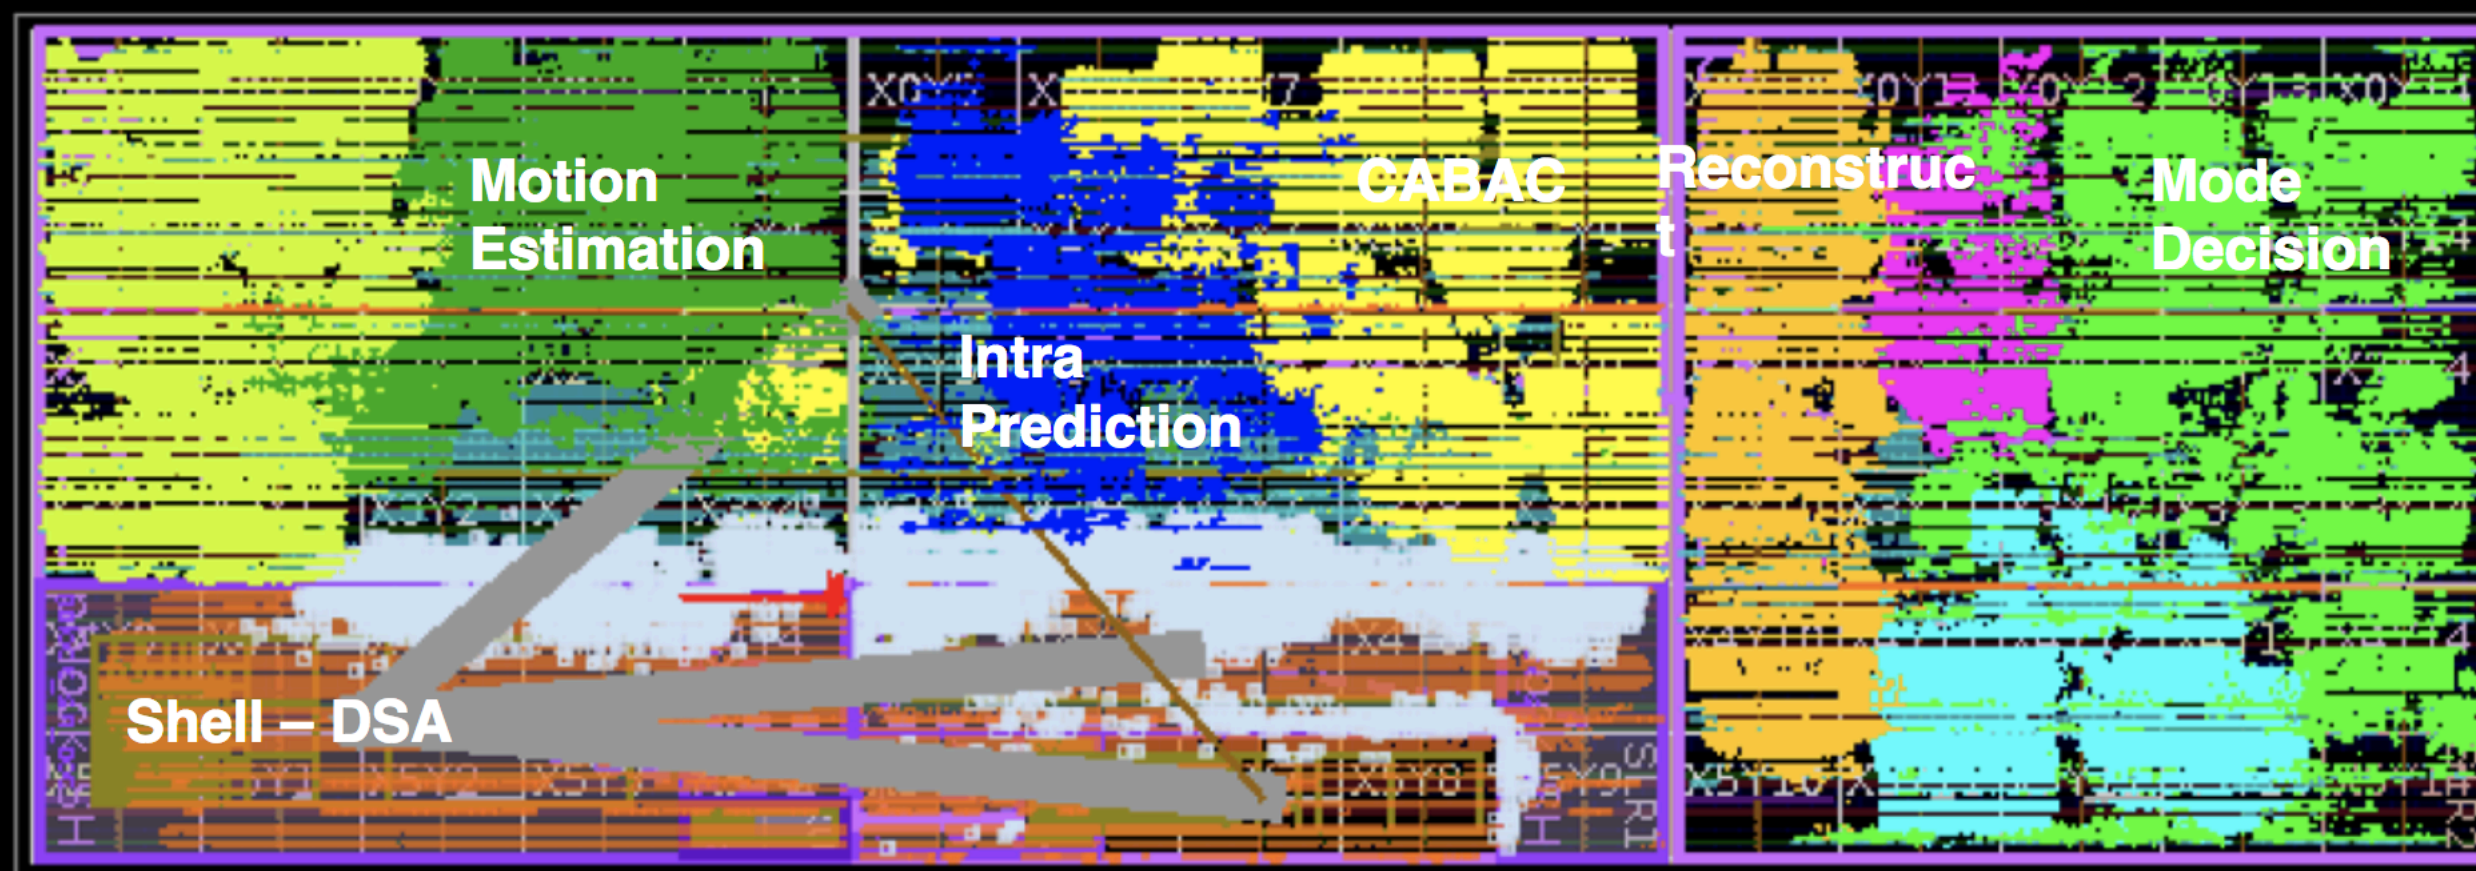

Performance vs x265

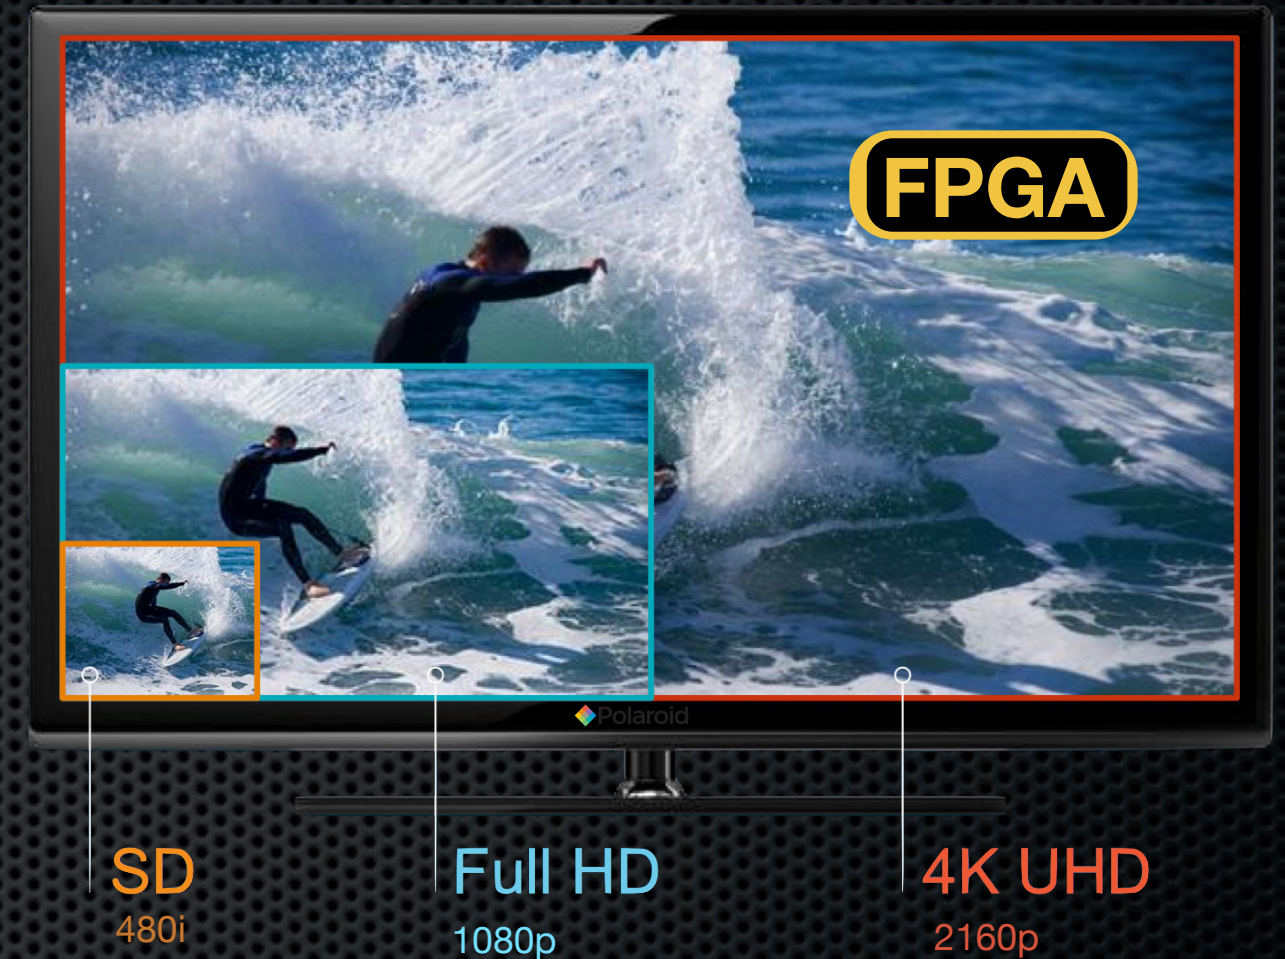

NGCodec's FPGA Design Process

Chestnut (HEVC) FPGA Layout

Conclusions

- ✦ FPGA are now in many data centers
- ✦ Video encoding is a great workload to replace CPUs
- ✦ Machine Learning 'Inference' is another key application
